

CHIPURUPALLI POOJITHA RAMYA

AI/ML Engineer • Full Stack Developer

7013103439 | chpujitaramya@gmail.com | linkedin.com/in/pujita-ramya-ch | github.com/Poojitha-Ramya

PROFESSIONAL SUMMARY

Final-year B.Tech (AI & ML) student with a 9.50 CGPA and a strong track record across machine learning, computer vision, generative AI, and full-stack development. Published researcher in Generative AI (GAN-based text-to-animation). Builder of production-style LLM-powered and deep learning applications including a real-time distracted driver detection system and an AI internship recommendation engine. Certified in Generative AI and Artificial Intelligence (Infosys Springboard). Two-time inter-college technical competition winner. Seeking entry-level roles in Software Engineering, Machine Learning, AI/ML Engineering, or Front-End Development.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL

Web & API Development: React.js, FastAPI, REST APIs, HTML5, CSS3, Component-Based Architecture, SPA Development

AI / ML & Deep Learning: Scikit-Learn, TensorFlow, CNN, VGG16, Transfer Learning, Object Detection, OpenAI API, LLM Prompting, Vector Embeddings, NumPy, Pandas, Matplotlib

Generative AI: GAN (Generative Adversarial Networks), Prompt Engineering, GPT Embeddings, RAG, LLM Integration, Text-to-Image Generation

Databases: MySQL, SQLite, Local Storage

Core CS Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems

Developer Tools: Git, GitHub, VS Code

Soft Skills: Problem Solving, Quick Learner, Communication, Adaptability, Focused Execution

INTERNSHIP EXPERIENCE

React JS Developer Intern — BRVS Tech LLC • Remote

July 2025 (1 Month)

- Architected and delivered a full-stack Campus Management System in React.js within a 4-week sprint, covering student enrollment, course scheduling, and faculty administration.
- Implemented component-based UI architecture with React state management and hooks, improving application responsiveness and eliminating unnecessary re-renders.
- Designed a local storage persistence layer to maintain session data across page refreshes, enabling a seamless SPA experience without back-end dependency.
- Collaborated in an Agile sprint environment, delivering milestones on schedule and earning React JS Web Application Internship Certification upon project sign-off.

PROJECTS

AI-Powered Internship Recommendation Platform

React • FastAPI • OpenAI API • Python • Vector Embeddings • 2025

- Built a full-stack LLM-powered recommendation engine that parses uploaded resumes and uses OpenAI GPT embeddings to semantically rank internships by relevance.
- Engineered vector-based semantic matching between resume content and internship descriptions, delivering personalized rankings beyond keyword search using RAG principles.
- Delivered end-to-end user flow with secure authentication, resume upload, dynamic filtering, and real-time results via React front-end and FastAPI back-end.

Distracted Driver Detection System

Python • VGG16 • CNN • Transfer Learning • Deep Learning • 2025

- Developed a real-time computer vision classifier using pre-trained VGG16 and CNN-based feature extraction to categorize driver behaviour as safe or distracted.
- Applied transfer learning to fine-tune VGG16 on annotated driver image datasets, producing a robust binary classification model suitable for road safety systems.
- Optimized inference speed and model accuracy through data augmentation and hyperparameter tuning, making the system viable for real-time deployment.

Campus Management System

React.js • Local Storage • SPA Architecture • 2025

- Developed a smart campus administration platform for managing students, faculty, and courses using React.js with fully responsive, dynamic single-page application design.

Personal Portfolio Website

HTML5 · CSS3 · Responsive Design · 2024

- Designed and deployed a responsive portfolio website showcasing projects, skills, and achievements — serving as a professional online presence for recruiter outreach.

RESEARCH & PUBLICATIONS

Generative AI-Based Social Media Text to Animation Conversion	2024–2025
• Authored and published a research paper proposing a GAN-based pipeline to automatically convert social media text into animated visual sequences — a novel cross-modal generative AI application. • Investigated state-of-the-art GAN variants and cross-modal generative architectures, contributing applied research at the intersection of NLP and computer vision.	

EDUCATION

B.Tech in Information Technology (AI & ML)	2023 – Present
GMR Institute of Technology, Rajam, Andhra Pradesh	CGPA: 9.50 / 10.0
Intermediate (MPC)	2021 – 2023
Sri Chaitanya Junior College, Visakhapatnam	92.2%
Secondary School Certificate (SSC)	2021
Sun Shine English Medium School, Nathavaram	99.3%

CERTIFICATIONS

■ Principles of Generative AI — Infosys Springboard	May 2026
■ Artificial Intelligence Primer — Infosys Springboard	April 2026
■ React JS Web Application Development — BRVS Tech LLC	2025
■ Deep Learning Essentials — L&T EduTech	2024
■ SQL Intermediate — HackerRank	2024
■ Java Skill UP — GeeksforGeeks	2024
